We recommend the AK 46/6000 for all those that want to playfully reach the rear side of roofs or buildings. It has a comparatively low body weight and is mounted on an 18 or 26 t truck, lifting a maximum of 6 t. On the jobsite this crane reaches up to 39 m of radius with 250 kg load and still 26 m with a load of 1.000 kg on the hook- both in an almost circular radius. Upon request this crane can be fitted with a double fully hydraulic extendible fly jib.

Camera technology is also available as an option. It transmits a live image from the top of the boom to the colour display of the remote control. Thanks to its compact design, its convenient driving characteristics as well as its surpassing manoeuvrability, the AK 46/6000 can also be set-up and used in tight spaces.
